for preparing medicaments for treating wounds such as dermal ulcers, pressure sores, venous sores, diabetic ulcers and burns and to promote skin graft growth, tissue repair; proliferation of new blood vessels, tissue regeneration and organ repair by promoting angiogenic activity o vascularization. This sequence represents the human 990126vegx protein used to illustrate the method of the invention.

This invention describes a novel vascular endothelial growth factor-X (VEGF-X) protein (Ia) and its encoding polymucleotide (IIa) which has vulnezary, ortostatic, antiphermatic, antiparitation, antiporitatic and antidabetic activity and acts as an angiogenesis and vascularization regulator. An antisense molecule of the invention is useful for treating correct theumatoid arthritis, psoriasis and diabetic retinopathy by inhibiting angiogenic activity or inappropriate vascularization including formation and proliferation of new blood vessels, growth and development of tissues, tissue regeneration and organ and tissue repair in a subject. The products of the invention are useful for preparing medicaments for treating wounds such as dermal ulcers, pressure sores, venous sores, diabetic ulcers and burns and to promote skin graft growth, tissue repair, proliferation of new blood vessels, tissue regeneration and organ repair, proliferation of new blood vessels, tissue regeneration and organ repair by promoting angiogenic activity or vascularization. This sequence represents the human VEGF-X protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     148
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           181
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       301
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    88
                New vascular endothelial growth factor protein, useful for treating or preventing diseases associated with inappropriate angiogenesis activity such as cancer, rheumatoid arthritis, psoriasis and wounds -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TFDERFGLEDPEDDICKYDFVEVEFSDGTILGRWCGSGTVPGKQISKGNQIRIRFVSDE

The present sequence is that of human PRO200 or vascular endothelial growth factor E (VEGF-E), as predicted from a cDNA clone (see AAA88519) that was isolated from a glioma cell line G61 library using probes (see AAA8852-26) based on an expressed sequence tag (see AAA88522) that showed homology to VEGF. PRO200 has a predicted mol.wt. of 39,029 and a pl of about 6.06. A method for producing PRO polypeptides, including PRO200, using a host cell transformed with a vector comprising a PRO nucleic acid is claimed. The invention relates to the use of PRO polypeptides to delay, prevent or rescue retinal ganglion cells, displaced retinal neurons selected from photoreceptors, retinal ganglion cells, displaced retinal ganglion cells, macrine cells, displaced anacrine cells, displaced anacrine cells, including wheller cells and cells, and supportive cells (including Mueller cells and cells are preferably photoreceptors and photoreceptor cells indivity or by an ocular disease selected from retinitis pigmentosa, macular cells in a caused by retinal injury, light or environmental trauma or by an ocular disease selected from retinial detachment, retinal cells, macular holes, cells are myopia, acute retinal necrosis syndrome, traumatic cells charm, celinopathy, retinal diseases, thrombocytopenic purpura, cellusion, collagen vascular diseases, thrombocytopenic purpura, cocclusion, retinal vasculltis and occlusion associated with Eales
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel PRO polypeptides useful for preventing or rescuing retinal cells from injury caused by ocular diseases such as retinitis pigmentosa, retinopathy, retinal degenerative diseases, degenerative myopia, uveitis -

Sixty four PRO polypeptides, useful in the diagnosis and treatment of immune related disorders, e.g. systemic lupus erythematosis, rheumatoid arthritis, osteoarthritis, thyroiditis and diabetes mellitus

The present invention describes sixty four human PRO proteins which can be used in the treatment of immune related diseases. The human PRO proteins, anti-PRO antibodies, agonists and antagonists are useful for proteins, anti-PRO antibodies, agonists and antagonists are useful for treating and diagnosing immune related disorders are selected from systemic lupus erythematosus, rheumatoid arthritis, costeoathritis, juvenile chronic arthritis, spondyloarthropathies, systemic sclerosis, idiopathic inflammatory myopathies, Sjogren's syndrome, systemic vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune thrombocytopaenia, thyroidits, diabetes mellitus, immune-mediated renal disease, diseases, cluten-sensitive enteropathy and Whitpple's disease, and peripheral nervous systems, hepatobiliary diseases, inflammatory bowel diseases, gluten-sensitive enteropathy and Whitpple's disease, autoimmune or immune-mediated skin diseases, allergic diseases, cuttoimmune or immune-mediated skin diseases, allergic diseases, controlading graft rejection and graft-versus-host-disease.

CC diseases including graft rejection and graft-versus-host-disease.

AAC58397 to AAC58978 represent PCR primers and hybridisation probe used in the isolation of human PRO sequences. AAC58397 to AAC58972 controlation and protein c sequences given in the exemplification of the present invention.

Nucleic acids encoding PRO polypeptides useful for preventing,
PT Aucleic acids encoding diagnosing a cardiovascular, endothelial or
Anglogenic disorders in mammals -

XX

XX

XX

Claim 72; Fig 50; 315pp; English.

XX

CThe present invention describes nucleic acids encoding PRO polypeptides
CC ardiovascular, endothelial or angiogenesis and cardiovascularist endothelial or angiogenic disorder in mammals by
CC modulating cell profileration, angiogenesis and cardiovascularisation,
and for identifying agonists and antagonists of these processes. The
CC modulating cell profileration, angiogenesis as associated with
CC motelic acids and the proteins they encode may be used in the
CC prevention, treatment and diagnosis of diseases associated with
CC prevention, treatment and diagnosis of diseases associated with
CC angiogenic disorders in mammals (e.g. atherosclerosis, cancers and
CC cardiac hypertrophy). For example, the nucleic acids (NCS) and vectors
CC containing them and the PRO polypeptide may be used to treat disorders
CC AAB24388 to AAB24435 represent nucleotide and protein sequences used in

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                          1 GKFQFSSNKEQNGVQDPQHE.....DVALEHHEECDCVCRGSTGG 318

APPLICANT: Bristol-Myers Squibb Company
TITLE OF INVENTION: IDENTIFICATION OF GENES FOR PREDICTING ACTIVITY OF COMPOUNDS TH
TITLE OF INVENTION: INTERACT WITH AND/OR MODULATE PROTEIN TYROSINE KINASES AND/OR
FILLE OF INVENTION: PROTEIN TYROSINE KINASE PATHWAYS IN BREAST CELLS
FILLE REFERENCE: D0273 PCT
CURRENT APPLICATION NUMBER: PCT/US03/26491
CURRENT PILLING DATE: 2003-08-26
PRIOR APPLICATION NUMBER: 60/406,385
PRIOR FILING DATE: 2002-08-27
NUMBER OF SEQ ID NOS: 557
SOFTWARE: Patentin version 3.2
SGOID NO 191
LENGTH: 345
